# Authorised signatory management on the blockchain

Authorised signatory management is usually a **manual**, **paper-based** and **costly** process.

Cygnetise utilises blockchain technology to solve the pain of signatory management by making it more **efficient**, **transparent** and **secure**.

Why blockchain?

- Share data real time with a tokenised URL

- Use a private permissioned network to ensure data integrity and validity at any point of the distribution process

- Use a decentralised network to maintain full control over your data at any time

CYGNETISE APPLICATION

Data   Assets   Hashes

ENCRYPTED & VERSIONED

DB   Object storage   Blockchain

Why Cygnetise?

Tamper proof & validated against the blockchain

Instant data management & distribution

Trusted, immutable audit trail

Multiple distribution methods

Oak Group have been using Cygnetise for many years as part of our efforts to drive down waste and introduce frictionless processes into our business
