

Digital authorised signatory management for CSPs

The problem

The majority of CSP's workflows are focused around the authorisation of legal documents and transactions, and the management of authorised signatories (internally, externally, or on behalf of customers).

The current process of managing authorised signatories is mostly manual, paper-based and inefficient, and can expose organisations to fraud.

The risk increases with the adoption of e-signatures and remote working.

The solution

Cygnetise is an application that digitises the process of managing authorised signatories, providing a secure, flexible and cost-effective solution.

Key benefits

1) Operational

- One centralised, secure platform
- Remote and instant access
- Tamper-proof and dynamic (only required once) sharing methods
- Available URL that can be attached to documents
- Permanent, clear and complete record of all changes

2) Revenue generation

- Outsourced Signatory Management Service model
- Charged to customer on a per list basis

Why Cygnetise?

Reduces the risk of fraud

Complements the use of eSignatures

Enables adherence to control frameworks

Provides source of revenue

”

Oak Group have been using Cygnetise for many years as part of our efforts to drive down waste and introduce frictionless processes into our business
